## Origin of XI

The diagram illustrates the BusinessObjects XI architecture. It is divided into two main sections: Reporting and Query Analysis. Reporting includes sub-components like Dashboards, Scorecards, Enterprise Crystal, and Embedded Reporting. Query Analysis includes Management Applications and Crystal Analysis. At the bottom, the Business Intelligence Platform is shown, including BI Portal, Crystal, Analytic Engines, Metadata, and Reporting Services. Several red boxes labeled 'BO' are placed over the diagram, indicating specific components or data points.
